IMPORTANT INFORMATION CONCERNING MONUMENTS

DIE AND BASE

The die is the main block of the monument. The base is the bottom part or the block upon which the die is set. A square base is a base with all edges and corners cut square. A beveled base is a base with the top corners and edges beveled. A wash on a base is the same as a bevel.

Where a square base is shown in this book, the design is priced to cover a square base. However, if a beveled base is preferred on one of these designs we will be glad to quote the small additional charge. The designs shown with beveled bases can be furnished only with that kind of base and are priced accordingly.

DIMENSIONS

The dimensions of monuments are always given in this order; width by thickness by height. To find the total height of a monument, add the height of the base to the height of the die. If further information regarding sizes of our monuments is desired write us.

FINISHES

By a polished finish is meant that the granite has been rubbed and highly polished until it has a brilliant mirror-like surface.

A sanded surface is as level as a polished surface but is not highly polished. It has the natural color and finish of cut granite.

The axed or hammered finish is where the stone has been cut smooth and tooled to roughen the surface slightly.

The rock finish is very rugged and has the rustic chipped appearance of natural cut stone. This is one of the most beautiful finishes used on granite.

LETTERING

The prices quoted on each design cover sufficient lettering for the names and dates of birth and death. Where an epitaph is desired, the cost will be 20c per letter.

SHIPMENTS

All shipments will be made promptly, but bear in mind the fact that a reasonable time must be allowed, as Each Memorial, Marker and Slab is made to order and requires time according to the size and to the season of the year.

TERMS

WE ALLOW A 10% DISCOUNT FOR CASH IN ADVANCE WITH ORDERS. If monument is desired shipped out "Cash on Delivery," we require a deposit of one-fourth of the selling price of the monument in advance with order, balance to be paid on delivery of monument at depot. We will gladly ship our monuments to any salesman or customers to be paid for after erection if salesman and customer desiring us to do so will furnish us, at the time order is placed, 4 or 5 names of business firms in their locality with whom they have had business transactions so we can write them for credit reference.

FREIGHT

ALL FREIGHT CHARGES TO CUSTOMER'S NEAREST RAILROAD DEPOT ARE PREPAID BY US. On any shipment to the following states add twenty per cent of the total cost of the monument: Montana, Wyoming, Colorado, New Mexico, Idaho, Utah, Arizona, Nevada, Washington, Oregon and California.

Simple directions for the erection of memorials will be furnished upon request

EPITAPHS

CHILDREN

1 Our Loved One	\$2.20
2 Our Little One	2.40
4 Gone to Be An Angel	3.00
6 Our Beloved Baby	2.80
7 Gone to a Better Land	3.40
8 Darling, We Miss Thee	3.40
9 Blessed Are the Early Dead	4.40
10 Asleep in Jesus, Blessed Thought	5.40
11 The Lovely Flower Has Faded	4.65
12 Safe in the Arms of Jesus	4.00
14 How Soon Fades the Tender Flower	5.40
15 A Fairer Bud of Promise Never Bloomed	6.20
16 A Sunbeam from the World Has Vanished	6.20
17 A Little Bud of Love Gone to Bloom with God Above.	7.80

EMBLEMS

All emblems are large, deeply cut, and show up to wonderful advantage. The following emblems may all be had at the low cost of \$6.00 each.

Masonic Blue Lodge
Odd Fellows
Modern Woodmen
Eastern Star

Masonic Mystic Shrine
Knights of Pythias
Woodmen of the World
American Legion

STONE MOUNTAIN GRANITE MEMORIALS

"Glorious Sentinels of Eternal Love"

ONE of the deepest rooted and most inspiring human customs is that of reverently marking the resting places of the dead. Since it is intended that the marker shall stand as a record for generations to come, and since it should fittingly express the tenderest of all emotions, there are two primary requirements which you want the monuments you erect to meet. They are permanence and beauty. Is it pleasing and suitable in appearance? Will it endure?

For monumental use, the best of all materials is granite, because to it the Creator gave not only surpassing dignity, grace and beauty, but unequaled durability as well. The ancients knew this—monuments they erected thousands of years ago are in perfect condition today, their smooth surfaces glistening as if they were polished yesterday; while any of us can see in nearby cemeteries marble stones only 25 to 50 years old already deteriorated to such an extent that they have become discolored, imperfect and so worn by weather that even the deeply carved inscriptions can scarcely be read.

Why then, you ask, has not granite, with its recognized advantages, long ago displaced marble for monumental use? The answer is simple. Heretofore granite has cost more—the difference has been so great that few except the extremely well-to-do felt that they could afford it. Marble was much cheaper, because, being not nearly so hard as granite, it was so much less expensive to quarry, work, carve, and finish. How significant is the fact, therefore, that of all of the world's finest memorials four-fifths are made of granite.

And how easy it is to foresee the future predominance of granite for all memorial purposes, now that on account of our gigantic scale of operations and the modern labor-saving quarrying machinery employed, we have been able to reduce costs until today we can offer the finest quality granite memorials at prices far below the cost of marble.

At the world-famed Stone Mountain, which in the language of scientists "is the most profound geologic phenomenon in the United States east of the Rockies" and "surpasses anything of its kind yet known in grandeur," carrying above the level of the Piedmont Plain more than 628 million tons—seven and a half billion cubic feet—of the oldest rock known to geologic time and affording an inexhaustible source of the finest true granite, are the quarries from which come the monuments illustrated in this booklet.

Remarkably uniform in color, texture, and composition, Stone Mountain Granite is not only the ideal monumental material, but is well adapted to all kinds of structural purposes, having been used for the construction work of government, municipal, and private buildings in 32 states, the District of Columbia, Cuba and Panama. Its pre-eminent strength, durability, and chemical and physical composition have been demonstrated in tests and analyses made by the highest authorities in the land.

It is on the face of Stone Mountain that there is now being carved the most colossal sculpture ever conceived by the mind of man—the gigantic memorial to the heroes of the South's Lost Cause. The magnitude of the project is illustrated by the fact that a luncheon was served to twenty persons on the brim of General Lee's hat. The perfection of Stone Mountain Granite as a monumental material is proven to the world by its choice for this great memorial. Its surpassing beauty, hardness, and durability have been recognized and praised by the leading geologists, scientists, and sculptors of modern times. It has been estimated that the exposed surface of Stone Mountain wears away or deteriorates only one-fourth inch in 1000 years. So the buyer of a monument from us not only has this certain assurance that he is using a material of flawless, everlasting quality but he will find added comfort and satisfaction in the knowledge that the monument that marks the spot so sacred to him is of the self same stone as Stone Mountain itself, and make the memory of his loved ones as enduring as the fame of the immortal Lee.

We have the most favorable conditions possible for quarrying our granite and this combined with the tremendous finishing plants and facilities as shown and described elsewhere in this catalogue make it possible to produce the finest quality granite memorials at prices far below all competitive companies.

Bear in mind, therefore, that granite memorials purchased direct from our quarries do not cost more. They actually cost less than marble; so there is no reason to buy memorials of anything but the finest quality and most durable material. Let your memorial be of Stone Mountain Granite—the material everlasting, that will still stand after thousands upon thousands of years, a silent, stately sentinel of inexpressible majesty, dignity and power, fittingly bearing through the ages its sacred message of reverent love and remembrance.

SUPERIORITY OF STONE MOUNTAIN GRANITE

IN presenting a Chemical Analysis of our stone as compared with other grade granites quarried in the United States, we wish to point out the advantages of one granite over another. The most detrimental substances in granite are: Iron Oxide, Iron Sesqui-oxide and Lime.

The combined deposit of Iron Oxide and Iron Sesqui-oxide in Stone Mountain Granite, total only ninety-four hundredths of one per cent. This explains why Stone Mountain Granite has never been known to rust.

The lime content is negligible and the general composition of the stone is such that the entire decomposition would be necessary before the lime could be released to such an extent as to be detrimental.

These facts explain why prominent government and private en-

gineers in the United States and Cuba have so consistently chosen and used Stone Mountain Granite for construction purposes as well as for national and international memorials.

The ability to resist decomposition in all climates is determined by the absorption or porosity of the stone.

Regarding absorption of the stone, a test was made a number of years ago by F. W. Clarke, then chief chemist, Department of Interior, United States Government. He immersed one thousand grammes of Stone Mountain Granite in water at sixty degrees temperature. This was allowed to remain immersed for six days.

This test indicated an absorption of only 254.28 grains of water per cubic foot or approximately one and one-half ounces of water to one hundred sixty-nine pounds of granite. This proves very conclusively that water or the absorption of water cannot possibly have any detrimental effect on Stone Mountain Granite.

COMPARATIVE CHEMICAL ANALYSIS

	Stone Mountain Granite	Imperial Blue	Barre	Westerly
Silica	72.56	72.76	69.89	71.64
Alumina	14.81	16.92	15.08	15.66
Iron Sesqui-oxide			1.04	
Iron Oxide	.94	1.97	1.46	2.34
Magnesia	.20	.39	.66	Trace
Lime	1.19	1.88	2.07	2.70
Soda	4.94	2.00	4.73	1.57
Potash	5.30	4.08	4.29	5.60
Water uncombined		.09	.31	.48
Water combined		.36	.23	

Interior View of One of Our Cutting Plants

OUR operations include two plants, such as shown in this picture. The one illustrated is 500 feet long and 40 feet wide. Our other finishing plant is 250 feet long by 70 feet wide. Our equipment in these plants includes six overhead electric cranes, more than 20 surfacing machines, as well as carborundum machines, lathes, polishers, and giant saws. We have in use one of the largest air compressors in the United States. Our shops alone have a capacity of more than 200 granite cutters.

Supply Inexhaustible

The supply of Stone Mountain Granite is inexhaustible. The exposed granite alone which protrudes above the level of the Piedmont Plateau would fill ten million, five hundred and seventy-five thousand (10,575,000) freight cars if fifty tons were placed in each car. A train formed of these cars would reach two and one-half times around the earth.

Augustus Lukeman's Model of the Central Group—Stone Mountain Memorial

The World's Largest Memorial

SO that you may realize the tremendous magnitude of the first three figures of the Confederate Memorial being carved on the side of Stone Mountain, we are showing pictures of a ten-story building, an ocean-going steamship, and the great Egyptian Sphinx.

So that the comparison may be accurate, these pictures have been reduced on approximately the same scale. The three figures on the monument will average approximately 153 feet in height, or about the same height as a twelve-story building.

Note the comparative size of the Egyptian Sphinx which, if placed on General Lee's shoulder, would only conceal a part of his head, while the central three figures alone are longer than a giant 550-foot ocean steamship.

The original plans, which are expected to be carried out, call for a legion of additional figures both on foot and on horseback, following the three leaders, which will extend approximately one-quarter of a mile in length. This means that the memorial, when completed, will be about 150 feet in height and approximately one-quarter of a mile in length.

In carving the original three figures, 250,000 tons of granite have already been cut back from around the figures. Truly, this is the largest and most wonderful memorial ever created by mankind.

Airplane View

THIS picture illustrates the magnitude of our operations. In the center may be seen two of our finishing plants. In the background, at the base of the mountain, is shown two of our six quarries. We own and operate a railway system between Stone Mountain and the town of Stone Mountain, Ga., consisting of ample siding facilities, equipped with modern locomotives and freight cars, and including passenger coaches for transporting employees of the Company.

IMPERIAL BLUE

"Elberton's Best Dark Blue Granite"

Our Imperial Blue is a beautiful blue granite quarried in the "red old hills of Georgia" where it was formed millions of years ago by some mighty volcanic action. The supply of flawless stock is inexhaustible, extending to a mighty depth into the earth. Complete, modern equipment at the quarry makes possible prompt delivery of this granite in any size or pattern.

No granite possesses more of the requisite qualities for monumental purposes. It is beautiful, durable and especially adapted to the hand of the sculptor.

Durability is the all-important quality of monumental granite. An examination of the natural outcrops where it has been exposed to sun, rain, frost and wind for many thousands of years shows that the disintegration or decay has been almost nothing.

The greater the ratio of absorption of a granite the greater its tendency to decay and deteriorate. According to the report of the Department of the Interior, United States Geological Survey Bulletin 40, page 112—"The Granites of Vermont," water absorbed by 100 pounds of various granites as compared with Imperial Blue:

Imperial Blue Granite -----	0.289
Bethel Granite	0.470
New Westerly Milford, N. H.	0.425
Hallowell	0.405
Concord	0.371
Westerly	0.340
Milford, Mass.	0.340
Barre	0.294

The beauty of the stone is as pronounced as its durability. It is a fine-grained granite of uniform texture, free from blemishes. The absence of iron adds greatly to its value. No granite quarried is more suitably adapted to the various finishes of modern memorials. It takes a high polish, a soft, clean hammered finish and is without equal carved.

It works well under the hammer and gives a striking contrast between the hammered and polished surface, which is requisite for high-grade monumental stock. It is a BEAUTIFUL material, wonderfully adapted to any finish desired in a monumental stone.

TO THOSE WHO PREFER A DARK BLUE GRANITE
WE RECOMMEND OUR IMPERIAL BLUE ELBERTON GRANITE!

1st. Because its chemical analysis when compared with that of other granite is found to be the best.

2nd. Because it possesses more of the mineral requisite for a memorial than do other granites.

3rd. Because it absorbs less moisture and is therefore less affected by the agencies of weathering. A granite which absorbs much water will soon disintegrate and discolor. Imperial Blue is insurance against such conditions.

4th. Because it possesses to the utmost degree the Quality of Beauty and is wonderfully adapted to any finish desired.

5th. Because you will be protected by our guarantee of quality.

6th. Because the cruel force of heat and cold, storm and rain, are powerless to efface the expression of your love from this stone.

7th. Because the memorial built of Imperial Blue Granite stands pre-eminently above substitutes.

8th. Because it possesses beauty, dignity, strength and durability—the requisites for a complete memorial.

9th. Because it is demanded by patrons who insist on having the best. Substitutes may be cheaper, but there is something lacking which Imperial Blue supplies.

GEORGIA MARBLE

It's an undisputed fact that Georgia Marble is beyond the shadow of a doubt the best and most durable monumental marble now quarried. It is formed of small crystals that overlap each other, thereby making it moisture-proof, and assures its permanency of color. This also renders it proof against the weather, as it's the same in formation as the famous Grecian Marble, which is still found standing in some of their ancient temples, after a lapse of more than two thousand years. Our mill is located near these famous Georgia Marble Quarries, which enables us to furnish our customers this Matchless Stone, in all its beauty and goodness, at very reasonable prices. Georgia Marble comes in three standard colors: White, Creole and Silver-Grey. The Creole is sometimes called a blue and white mottled Marble. If your customers want the best Marble the country affords, insist on their taking Georgia Marble, and they'll always be satisfied.
